

## Year 1

During the second half of the Spring term in Theme we will be learning about the individual countries of the UK and exploring the capital cities and physical and human features. In Science we will be looking at plants. The ideas below are just suggestions. Feel free to add any of your own.

Read a selection of comic books and make your own comic strip at home.

Have a go at planting your own seeds or beans and keep a plant diary to record how they grow. What things will your plants need to grow?

Practice counting in 2s, 5s and 10s to over 100, both forwards and backwards. Why not start at a different number other than 0 e.g. 30?

Use a computer program to create a poster about being safe online.

We are looking at the Easter Story in RE. Retell the story in your own words. Illustrate it in comic book style.

Write a book review about one of the stories we have read in class. What did you like about the story? Who was your favourite character? Would you have ended the story differently? If so, how?

When you eat dinner at home, think about what food groups the ingredients belong to and make a note in a food diary. Draw a picture to illustrate.

We have looked at different forms of traditional dance from around the world. Use the internet to watch other dances from different countries and practice some of the moves yourself!
